TERMOMIX 3-way and 4-way compact mixing valves of brass have been developed especially for small hydronic heating systems, boilers, heat exchangers and air heating/cooling applications. TERMOMIX valves can be used as mixing valves or as diverting valves. There are several ways of installing. TERMOMIX valves have excellent control characteristics. They control both supply and return lines. The valves can be mounted in any position. TERMOMIX valves are very suitable for motorizing because of their low torque. The valves are available for right-hand and left-hand mounting.
